PROFESSIONAL EXPERIENCE

VOUS Web Team | Miami, FL

April 2023 - now

Web Developer - Volunteer

- Produces thorough deliverables in the form of JavaScript and CSS code that includes every necessary component for instant implementation.
- Works with a codebase of almost 100 files including an SQL database, a CMS, backend code written in GO and frontend JavaScript code.
- Collaborates with a team of up to 6 people to solve problems and concerns.

VOUS Full Stack Internship | Miami, FL

May - August 2023

Web Developer - Intern

- Implemented business logic for an ecommerce section of the VOUSCon website which automated tracking inventory of all merchandise and each of their variants.
- Refined existing JavaScript Code and fixed bugs on the VOUS crew sign up website which eliminated redundancies in the UX saving the user 3 additional steps.
- Delivered cloud functions in GO for backend essentials such as querying data from the Shopify API and sending custom push notifications for a mobile app.

PROJECTS

Travel Smart | *Plan, Budget, & Discover.*

- Created a full stack & server side rendered React web application with several integrations including the google maps API, google places API, firebase authentication and a firestore database.
- Programmed several features including filtering logic, reading and writing to the database, authentication, animations, and dynamically populating pages with information.
- Optimized performance by integrating a binary search algorithm that reduced the time complexity of several functions from $O(n^2)$ to $O(n \log n)$.
- Built a user-friendly UI made with responsive design principles such as flexbox, grid, media queries and relative sizing strategies.

TinCar | *Customer Friendly Used Car Website.*

- Integrated an API to gather vehicle details and formulated car pricing based on average market values with automatic calculations that consider depreciation rate and added cost to specific trims.
- Built with React using Object Oriented Programming principles resulting in ease of refactoring and better organization.
- Set up a MongoDB database to store user information and credentials along with the Square API for payment processing.
- Implemented tools allowing users to get financing information, exact vehicle specifications, and more.

SKILLS

Programming: HTML, CSS, JavaScript, React, NodeJS, GO

Languages: English & Spanish
